

## Seeing and Feeling is Believing

### The All-New, Ultralight **Micro250**

Micro250 pictured with the Oakley Half Jacket;  
multiple frame options available

**The Micro250 is the lightest loupe in clinical magnification** that provides you with an exceptional field-of-view (up to 6 inches) and an extra long depth-of-field (as long as 14 inches).

**The Micro250 only weighs 10 grams\*** – compared to up to 30 grams for other 2.5x loupes – and when combined with our patented Ergo Frame or one of the many frames from our exclusive Oakley line, you will hardly feel a thing on your face. (\*weight of loupe ocular pair)

**The Micro250 helps you see and feel your best** since it combines the best in vision and ergonomics with SurgiTel's ErgoVision HD technology. You will see your magnified images in high definition while working with an ergonomic neck posture.
